

WHITE PAPER  
VO. 1

# XWARRIORS TEAM

**XWARRIOR JAX**

**FOUNDER**

## ABOUT ME:

Working as a tech consultant for over four years after completing my Computer Science degree, I have **ALWAYS** been inspired by innovation and opportunity. The world of technology never ceases to change, and XRP has been, and will continue to be at the front of innovation for years to come.

This project was inspired by my love for Anime and for digital revolution. The fact that I can use this passion to leave my everlasting impact on the internet during this revolutionary age is not only humbling, but pushes me day and night to give my blood, sweat, and tears to this project.

## RESPONSIBILITIES:

Design, Technical Development Oversight,  
Strategy, Business Administration

# XWARRIORS TEAM

**XRPEACE SENPAI**

## RESPONSIBILITIES:

Marketing, Public Relations,  
Community Engagement, Social Media

### ABOUT ME:

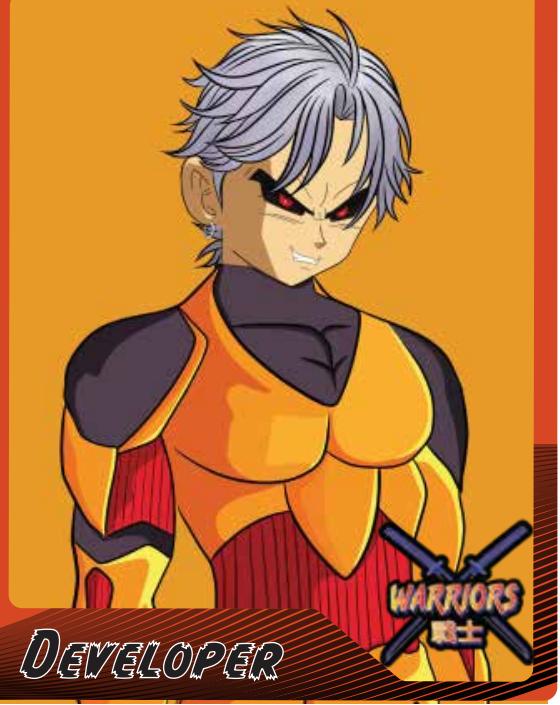

My life changed when I was first introduced to Crypto and XRP by a dear colleague of mine. During the pandemic I put my degree in Community Development to good use and spent most of my days researching and becoming an avid member of the XRP Community (alongside my work in education) – I haven't looked back since.

I am passionate about Crypto, NFT Art and Blockchain technologies and would consider myself a huge XRPL advocate, considering its monumental potential in the Crypto Space. My experience consists of promoting & working with brands and other XRPL projects, creating exposure, and offering creative viewpoints.

AS A SELF-PROCLAIMED WEEB (SUPER ANIME FAN) SINCE CHILDHOOD, I COULD NOT BE MORE HONORED TO HELP PRESENT XWARRIORS TO THE NFT WORLD. I LOOK FORWARD TO GROWING WITH THE COMMUNITY AND GIVING IT MY ALL!

# XWARRIORS TEAM

**WARRIOR WENDY**

## RESPONSIBILITIES:

Development and Technical Insight,  
UX Design

### ABOUT ME:

Like many others at the start of the pandemic, my interest in crypto was first sparked by meme coins. (Not fully understanding what it was) As I started to read into crypto, the more I saw the massive potential it can have on modern day technology. Coming from a technical background, I've had my fair share of logic and analytics, especially user experience and design. Design and composition in reference to anime can tell a lot about a character.

On top of that, there's always something out there for everyone - whether you're into futuristic bounty hunters, man-eating humanoids, or demon slaying fighters. What's exciting about the XWarriors project is that it brings together my love of anime and crypto, which is why I'm stoked to be a part of this amazing team and community.

# TIMING AND OPPORTUNITY

When we first launched this project, we were weighing out a few options to decide which blockchain we should launch on. It is quite difficult to decide when you have so many great options in front of you, and they each have their pros and cons.

While the XRPL was at the top of our list, we still had a few concerns, mainly since it was uncharted territory for our team from a technical standpoint and there was a learning curve. However, it was not long before the XRP community reached out to us and welcomed us with open arms. They did everything in their power to not only support us in launching on the XRPL but helping us every step of the way.

Before we knew it, we were surrounded with family that did everything in their power to offer their unwavering support. It was not long before we started questioning why we ever considered launching on a different blockchain. The community, along with the utility offered by XRP is unmatched.

One of our key goals for this project is to prove that to the rest of the world. We want to pioneer a framework for existing projects on the XRPL and future projects. While we understand that there are challenges, it is our goal to overcome those challenges and help the rest of our XRP family in doing the same. We have an opportunity to become one of the first Anime projects on the XRPL, and we will do everything we can on our end to guarantee the long-term success of this project and delineate to the rest of the world the advantages and notability of XRP.

# XWARRIORS IDENTITY

OUR GOAL IS TO GIVE OUR COMMUNITY ONE OF THE FIRST AND MOST SUPPORTED NFT PROJECTS ON XRPL.

This project is fueled by our community and we do our best to take every opinion and idea into account. We strongly believe that XRPL will thrive in the future and want to pave the way for others!

Our community is growing exponentially, and it won't be long before more and more projects get on the XRPL.

By owning an XWarrior, you are showing the rest of the world that you were one of the first few to this technological revolution!

# XWARRIORS /IDENTITY

What is our vision? To be one of THE BEST NFT collections on XRPL. We want to pave the way for many other projects to participate on the XRPL and learn how to maximize its true potential. Likewise, we also want to take this community by storm. We strongly believe that with our original art, depth, and dedication, we can be one of the biggest names on the XRPL ecosystem! Soon after the minting of our collection, we have massive plans to shift into the metaverse and provide a gaming experience that has never been seen before.

However, we are aware of the blockades and barriers that we will face along the way and will do everything we can to push through them. It is of utmost important to us to provide transparency to our community and keep them involved every step of the way. We are nothing without our community backing us up and helping us overcome these challenges, and they hold precedence over anything else.

# XWARRIORS NFT

What are the XWarriors? Simply put, the XWarriors are 10,000, unique, randomized Anime style warriors as collectible NFT's. With a 100+ different traits to choose one, you can be guaranteed that your warrior will easily be distinguishable from the rest.

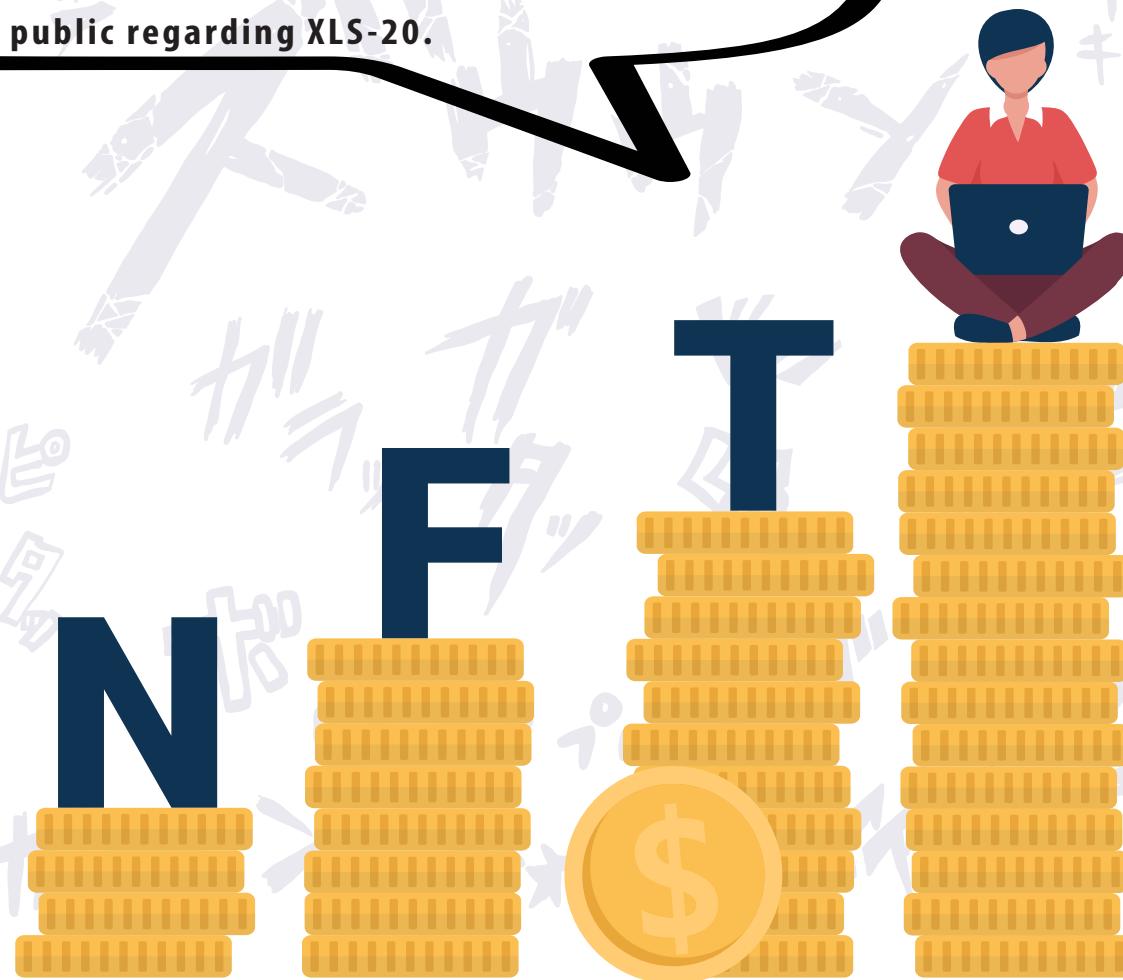

In addition, each trait will also have a different degree of rarity. This will ultimately determine which Warriors are most sought after and exclusive.

While our first collection is limited to just XWarriors, we have major plans to include female warriors in the future, which will potentially be airdropped to our warrior holders.

# XWARRIORS NFT

It is important to note that the current capabilities of the XRPL do not support a launch of NFT's which meets the quality that we are striving to deliver. Since there is currently no support for these NFT's, we will wait until XRPL releases a more refined platform to launch our NFT's. However, we will announce further details as soon as XRPL releases more information to the public regarding XLS-20.

# ***Road Map***

**Q1: OCTOBER - DECEMBER (2021)**

- Develop NFT concepts
- Marketing/Begin building community
- Determine blockchain
- Onboard developers
- Release Whitepaper
- Develop official website
- XUMM KYC Verification
- Create tokens on XUMM, release our trustline, and airdrop them
- Begin partnerships with influencers and other NFT projects on XRPL/heavy marketing
  - Hold giveaways for additional token airdrops
  - Add more variants to art and finishing developing 10,000 NFT's

# ***Road Map***

- Begin token swap process once XLS-20 is live. Each XWarrior coin holder will receive 1 XWarrior NFT per token that they trade in. (1 XWarrior token = 1 NFT) The XWarrior tokens will be then burned, eventually eliminating their supply and increasing the scarcity for the NFT's
- Focus on growing our community and building a solid foundation through collaboration
- Shine light and showcase the utility of XRP and XRPL ecosystem and bring grater attention to existing projects utilizing it
- Focus on transitioning XWarriors into the metaverse (While we are focused on growing our brand name and community after minting day, one of our major long term plans is to launch a videogame where our holders will be able to use their warriors)
- Give back to the community; assist other projects wanting to utilize the XRPL ecosystem

# TOKENOMICS

The XWarrior Token will serve as an IOU, which gives the owner the option to swap one whole token for an NFT on launch day. After much discussion about whether the token should be burned after the exchange for an NFT or kept in supply, we have decided that we will implement a burn mechanism where each token that is swapped for an NFT will be burned.

Here are a few reasons which factored deeply into our decision:

- If we decide not to burn the tokens after exchange, there will be an unlimited supply of these tokens, and eliminate any form of scarcity and demand. There will be an infinite supply in the market and demand for them will significantly decrease, decreasing the incentive to purchase them and creating a never-ending cycle
- When a significant number of our token holders are left with a fragmented margin of these tokens (<1), there will be an organic desire to continue trading these tokens until there are none left in the market. Therefore, the market will remain intact until all the tokens have been burned

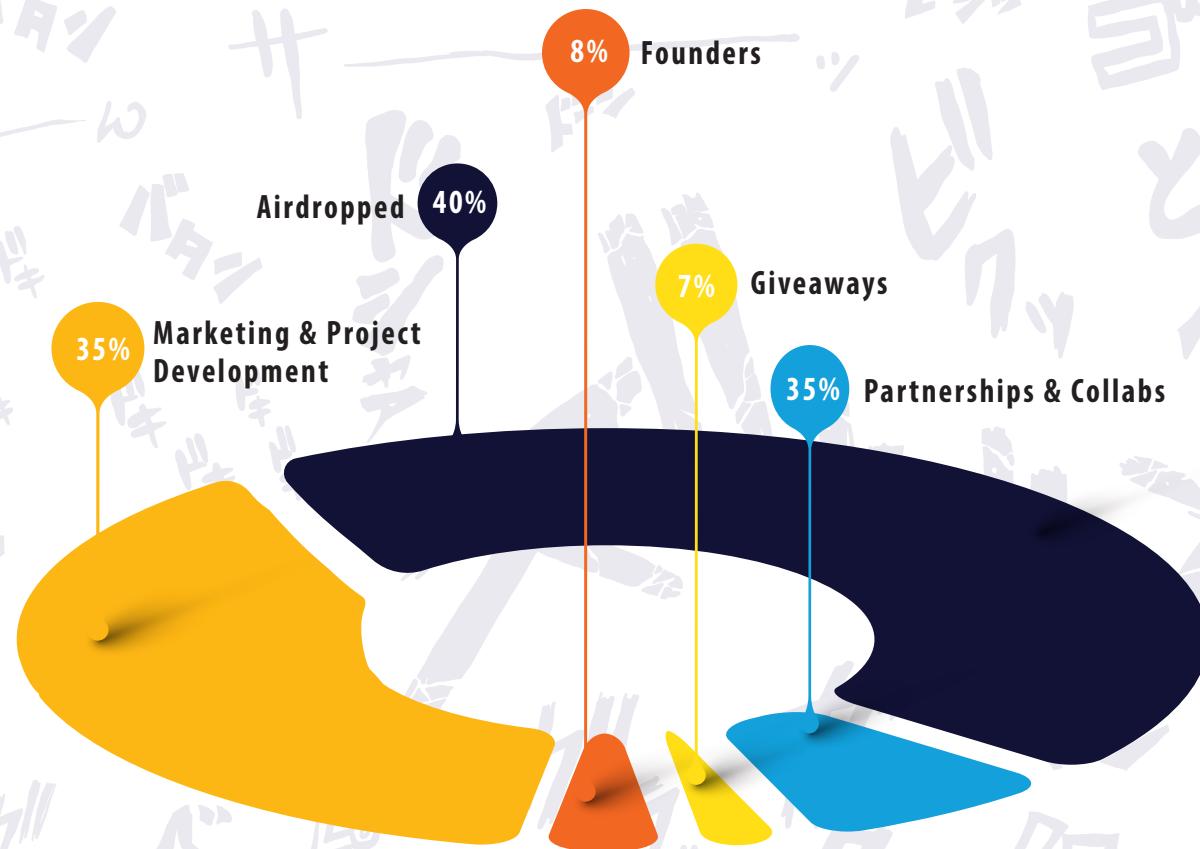

## TOKEN DISTRIBUTION

The current strategy for our distribution of tokens is as follows:

Our issuer account will be blackholed. In simple terms, this means that there will NEVER be more than 10,000 XWarriors tokens created. Blackholing our account ensures this.

# TOKENOMICS

4,000 tokens will be airdropped (40%)

1,000 tokens will be reserved for future business partnerships and collaborations (10%)

3,500 tokens will be reserved for marketing and project development (35%)

700 tokens will be reserved for giveaways (7%)

800 tokens will be reserved for our founders (8%) (Locked Until Mint Day)

# TOKENOMICS

To guarantee the long-term success of this project, we have only set aside 8% of the tokens for our founders! We strongly believe that the most important aspect of our project is our community, and we want to do whatever we can to give back and reinvest back into our project! We have grown at such a tremendous rate in such a short amount of time and for that we owe everything to our community. We will always do everything we can on our end to reward our community for their vote of confidence and dedication to this project, our team, and overall growth.

# METAVERSE

One of our main long-term goals is creating a PVP MMORPG video game where our XWarriors holders can use their NFT's to transition into a whole separate universe! While we realize that this will be a journey with many roadblocks and challenges, we are ready to do whatever we can from our end to make sure that we carry out this goal. There are MANY plans that we have in the future regarding how we can advance this project, and we cannot wait to embark on this journey with all of you.

To give back to our community even further, we want to base this game off your inputs and ideas! As we get closer to launch day, we will start holding more and more polls and activities to gauge our community input and get a feel for what our supporters are interested in! If you have been following this project closely, then you would know that we have been heavily influenced by the wants of our community and giving everyone an attentive ear is of utmost priority for us. Likewise, we will continue to keep the same attitude as we progress in this project!

While it is extremely exciting for us to dive into this venture with our community and big things lie ahead of us, we believe that it is our responsibility to discuss the risks affiliated with trading and spending money on the blockchain. First and foremost, it is important to understand that volatility surrounds crypto markets. While there is a possibility to see traction that one could have never imagined, there is also a possibility to experience loss that is beyond your control. There are so many factors that affect the state of the market and there is absolutely no way for us to predict them. Therefore, we cannot stress this enough, but please make sure that you are ONLY spending money that you can afford to lose. Please do not risk money that is a dire necessity for you and will affect your livelihood in case of a potential loss. There is absolutely no way for our team to guarantee a 100% return on your investment. As mentioned previously, there are so many factors that can cause the market to go up or down, and many times they strike without warning. We will do everything we can from our end to ensure that this project is a success and that our community is rewarded for their dedication and support. Unfortunately, there is a possibility of elements beyond our authority which can sway the market in a direction opposite of what we intended. Therefore, it is important that we are transparent to our community regarding this, and we will ALWAYS suggest making wise financial decisions and only investing money that you can afford to lose.

We cannot wait to embark on this journey with you and cannot emphasize how ecstatic we are for your support and vote of confidence. We will always ensure that we are doing whatever we can to guarantee the long-term success of this project and benefit both our team and community in the long run.
